

HydraFoam™ Hydrophilic Foam Dressing

HydraFoam™ is a hydrophilic (water-loving), highly absorbent foam dressing that wicks wound exudate to reduce the risk for maceration of moderate to heavily draining wounds. HydraFoam™ is non-adhesive so it is easy to remove and can be cut to size to support moist wound healing of irregularly shaped wounds. HydraFoam™ needs to be secured in place.

Benefits:

- Supports moist wound healing and autolytic debridement
- Excellent exudate management to minimize maceration
- Supports normalization of wound bed temperature
- Absorption, support and cushioning help manage hypergranulation tissue
- Latex free

Indications:

A primary dressing that may be used for the management of acute or chronic partial and full thickness wounds/ulcers with moderate to heavy exudate.
